

# ONION

---

A design-led seating range combining style, durability and safety

Designed in collaboration with **David Fox Design**, Onion forms part of a new tub seating range designed for both hospitality and healthcare environments. Further developed with a dual-purpose approach, it has been carefully refined to perform even in challenging settings, offering one cohesive solution across sectors.

Its smooth, fully rounded form removes sharp edges, reducing risk while maintaining a soft, welcoming aesthetic. The contemporary design integrates effortlessly into a wide range of interiors, from demanding environments to more relaxed, hospitality inspired settings.

Engineered for strength and reliability, Onion features a robust construction suited to demanding use. The weighted, sculpted form helps deter lifting, movement or misuse, supporting safer, more controlled spaces without compromising on design.

A fully enclosed base eliminates gaps and access points, improving both hygiene and ease of maintenance. For added reassurance, the unit is secured using stainless steel security fixings, ensuring safety and stability.

The Onion range is a versatile, design-led solution that balances safety, durability and comfort across every environment.

# ONION

“We are very pleased to announce the launch of the Onion range, a chair design that brings complex, organic forms to life through expertly crafted, traditional frame-making techniques.”
